

Managing People and Organization — Practice Questions

Part 1 is auto-generated per lecture (quick recap + one exam-style question testing the trickiest concept covered). Part 2 is extracted directly from the course's own question/case materials — verbatim, not LLM-regenerated, so treat those as authoritative.

Part 1: Lecture-by-Lecture Quick Practice

Lecture 01 (2026-07-04)

Topic: Lecture 01

Logic: No speech was detected in the recording.

Practice Question: Based on the provided notes, what content was captured in the recording?

Solution: No speech was detected.

Why: This tests the fact that no speech was detected in the recording.

Lecture 02 (2026-07-04)

Topic: Lecture 02 (No content)

Logic: No content provided.

Practice Question: No question can be generated because no concepts, rules, or scenarios are present in the provided notes.

Solution: N/A

Why: The source notes contain no educational content.

Lecture 03 (2026-07-04)

Topic: Lecture 03 (Managing People and Organization)

Logic: No speech was detected in this recording.

Practice Question: N/A

Solution: N/A

Why: N/A

Lecture 04 (2026-07-04)

Topic: Group Behavior and Conformity

Logic: Conformity is distinguished by the individual's motivation: Informational Conformity is a belief-based shift where the individual is convinced the group is correct, whereas Normative Conformity is a fear-based shift where the individual conforms to avoid being seen as a "deviant" or "outlier."

Practice Question: During a group discussion, a team member realizes the group's consensus is incorrect but agrees with the group's decision specifically to avoid being seen as a "deviant" or "outlier." Identify the type of conformity.

Solution: Normative Conformity.

Why: This tests the distinction between belief-based shift (Informational) and fear-based behavior adjustment to avoid disapproval (Normative).

Lecture 05 (2026-07-05)

Topic: Work Groups vs. Work Teams

Logic: A "team" is defined by "collective performance" and "positive" synergy, whereas a "group" focuses on "sharing information" with "neutral or negative" synergy. The key distinction is that "teams" involve "mutual" accountability, while "groups" have only "individual" accountability.

Practice Question: An organization is evaluating two units: Unit A, where members share information and are held individually accountable; and Unit B, where members work for collective performance and are held both individually and mutually accountable. Which unit is a "team"?

Solution: Unit B is the team because it targets "collective performance" and utilizes "mutual" accountability.

Why: This tests the "Accountability Distinction" and "Synergy as a Differentiator" traps.

Lecture 06 (2026-07-05)

Topic: Motivation and Reward Systems

Logic: Extrinsic rewards can ensure "compliance" (doing the task because it is rewarded) but do not necessarily buy "engagement" (personal commitment); specifically, rewards can "punish" "intrinsic motivation" by making the individual only want to perform the task for the reward.

Practice Question: A manager offers a cash bonus to a staff member who previously showed great personal interest and high levels of "intrinsic motivation" for a project. After the bonus is implemented, the staff member completes the task perfectly but no longer shows any personal commitment to the work or any interest in the project's outcome. Based on the notes, what occurred?

Solution: The reward bought "compliance" but failed to provide "engagement" because the extrinsic reward "punished" the staff member's "intrinsic motivation."

Why: This tests the distinction between "compliance" and "engagement" when using extrinsic rewards.

Lecture 07 (2026-07-05)

Topic: Team Success Factors

Logic: Psychological Safety is a significant driver of success because it provides a climate where members feel safe to speak up, admit mistakes, and show their "true" selves; it is considered a more significant driver of success than individual ability or personality.

Practice Question: A manager is forming a new team and must choose between a group of individuals with high "individual ability" and a group of individuals who operate in an environment of "Psychological Safety" (where they feel safe to speak up, admit mistakes, and show their "true" selves). Based on the

notes, which factor is a more significant driver of success?

Solution: The group with **Psychological Safety** is the more significant driver of success.

Why: This tests the specific rule that Psychological Safety outweighs individual ability or personality.

Lecture 08 (2026-07-12)

Topic: Leadership vs. Management (HBR 2004 Framework)

Logic: Managers are characterized by an impersonal/passive attitude toward goals, a focus on process, and a tendency to avoid risk. Leaders are characterized by a personal/active attitude, a focus on events/decisions, and a willingness to take risks to alter human and economic relationships.

Practice Question: A department head is tasked with developing a fresh approach that involves taking a risk to fundamentally alter human and economic relationships within the firm. Based on the H.B.R. 2004 framework, is this a management task or a leadership task?

Solution: Leadership. Leaders are characterized by a personal/active attitude, focus on events/decisions, and a willingness to take risks; managers are characterized by an impersonal/passive attitude, a focus on process, and a tendency to avoid risk.

Why: This tests the distinction between management's focus on process/risk-avoidance and leadership's focus on events/risk-taking.

Lecture 09 (2026-07-12)

Topic: Evaluation of Persuasion

Logic: Automatic processing is fast, emotional, and easily swayed by aesthetics (jingles, photos). Controlled processing is slower, logic-based, and harder to sway because it relies on facts, figures, and logic.

Practice Question: A communication uses a catchy jingle and photos; a second communication uses facts, figures, and logic. Which communication uses Controlled Processing?

Solution: The second communication.

Why: This tests the distinction between automatic (aesthetic-based) and controlled (fact-based) processing.

Lecture 10 (2026-07-19)

Topic: Lecture 10 (2026-07-19)

Logic: No speech detected.

Practice Question: No speech detected.

Solution: No speech detected.

Why: No speech detected.

Lecture 11 (2026-07-19)

Topic: Lecture 11 (Managing People and Organization)

Logic: No speech was detected in the recording.

Practice Question: Based on the "Quick Summary" provided in the notes, what was the content of the recorded session?

Solution: No speech was detected.

Why: This tests the fact that the recording contains no speech.

Lecture 12 (2026-07-19)

Topic: Lecture 12

Logic: No speech was detected in the recording, meaning no content was provided.

Practice Question: Based on the provided notes, what specific management techniques or organizational concepts were discussed in this lecture?

Solution: None. The notes state that no speech was detected.

Why: This tests the student's ability to strictly adhere to the provided source material and avoid using outside information.

Lecture 13 (2026-07-19)

Topic: Organizational Points of View

Logic: A Bureaucrat's Point of View is characterized by a lack of ownership, authority, or approval. In contrast, an Administrator's Point of View is characterized by a focus on rule books and past precedent.

Practice Question: An employee refuses to implement a new project, stating, "The rule book does not allow for this change." Which Point of View is this employee demonstrating?

Solution: 1. Identify the "rule book" keyword in the statement. 2. Match this to the Administrator's Point of View.

Why: This tests the distinction between the Administrator (rule books) and the Bureaucrat (lack of ownership, authority, or approval).

Lecture 14 (2026-07-19)

Topic: Leadership Communication Dynamics

Logic: "Restricting" is an active closing of dialogue by the leader. "Not inviting" is a failure to create a space where members feel they can contribute.

Practice Question: A manager observes that team members are silent during a meeting. The manager is not actively closing the dialogue, but has failed to create a space where members feel they can contribute. Is this "restricting" or "not inviting"?

Solution: Not inviting.

Why: This tests the distinction between an active closing of dialogue (restricting) and a failure to create a space for contribution (not inviting).

Lecture 15 (2026-07-26)

Topic: Organizational Culture: Tangible vs. Invisible Factors

Logic: Culture is composed of "Tangible" factors (visible elements such as dress codes and amenities) and "Invisible" factors (not visible to the naked eye but felt or observed over time, such as trust and core values).

Practice Question: A CEO provides a handwritten thank-you note to an employee for an outstanding contribution. Is this a "Tangible" or "Invisible" factor?

Solution: Tangible. It is a "tangible gesture."

Why: This tests the identification of "Tangible" vs. "Invisible" factors.

Lecture 16 (2026-08-01)

Topic: Boundary Spanning

Logic: External boundary spanning (interaction with outside entities) is only most effective when it is followed up by internal boundary spanning (communication across internal departments).

Practice Question: A company forms a team to manage relationships with outside suppliers and government agencies. To ensure this initiative is most effective, what must the company also require of the team? A) Higher work specialization B) Internal boundary spanning C) Higher formalization D) A larger span of control

Solution: Identify the team's role as "external boundary spanning" (interaction with outside entities) and apply the "Synergy Rule," which states that external boundary spanning is most effective when followed up by internal boundary spanning.

Why: This tests the "Synergy Rule" which requires internal boundary spanning to maximize the effectiveness of external boundary spanning.

Lecture 17 (2026-08-02)

Topic: Selection and Interviewer Bias

Logic: Selection is the process of differentiating between applicants by filtering out those who do not meet "checkmarks" (requisite qualifications and competence). To ensure accuracy, interviewers must avoid "snap judgments" and the "Halo effect," where one specific trait or job-related attribute influences the evaluation of all other qualities of an applicant.

Practice Question: An interviewer is evaluating a candidate for a role requiring "organizational fit." The candidate is exceptionally charismatic and well-spoken during the first five minutes of the interview. The interviewer immediately concludes that the candidate also possesses high technical proficiency and strong logic. Based on the "Common Interview Problems" listed in the notes, which specific bias is the interviewer committing?

Solution: The interviewer is succumbing to the "Halo effect," where one trait or job-related attribute influences the evaluation of the remaining qualities of an applicant.

Why: This tests the ability to identify a specific interview bias (the "Halo effect") rather than just identifying the type of interview.

Lecture 18 (2026-08-02)

Topic: Organizational Culture

Logic: A Strong Culture is defined by values that are widely shared and where employees have a strong identification with the culture and its history; a Weak Culture is defined by values limited to a few people (top management) and little employee identification.

Practice Question: A company maintains a consistent brand image, but its core values are only known by the executive team, and most employees are unable to tell stories about the company's history or heroes. Is this a Strong or Weak Culture?

Solution: Weak Culture. The notes state that a Weak Culture has values limited to few people (top management), little knowledge of company history or heroes, and little identification with the culture.

Why: This tests the requirement for internal shared knowledge and identification as opposed to external brand consistency.

Lecture 19 (2026-08-09)

Topic: Compensation Management and Strategic Alignment

Logic: The compensation strategy (the blend of cash, incentives, and benefits) must be selected based on the organization's specific market position and maturity stage (Invest to grow, Manage earnings, or Harvest earnings).

Practice Question: A company operating in a market characterized by "no real growth or decline" is currently focused on "harvesting earnings" to reinvest elsewhere. Based on the provided tables, what is the appropriate compensation strategy and blend of components for this firm?

Solution: The firm should adopt a strategy that puts "stress on cost control," consisting of below-average cash, small incentives tied to cost control, and standard benefits.

Why: This tests the application of the "Business strategy and remuneration" table to a specific corporate scenario.

Lecture 20 (2026-08-09)

Topic: Organizational Citizenship Behavior (OCB)

Logic: OCB is defined as voluntary behaviors that benefit the organization. However, OCB is not expected from employees in high-stress or bad-management environments.

Practice Question: In a department where the manager practices a micromanagement style and there is a lack of transparency, should management expect employees to demonstrate Organizational Citizenship Behavior (OCB)?

Solution: No, because OCB is not expected from employees in high-stress or bad-management environments.

Why: This tests the specific exclusion of OCB in high-stress or poorly managed environments.

Lecture 21 (2026-08-22)

Topic: Selection Risks and Errors

Logic: Selection is the process of finding the "best suitable" candidate by differentiating between applicants. The primary risk to be minimized is the "Acceptance Error" (hiring a candidate who ultimately fails), whereas a "Reject Error" represents a "missed opportunity" (rejecting a high-potential, capable candidate).

Practice Question: An organization is reviewing two candidates during the selection process. Candidate A is a mediocre performer who is hired, and Candidate B is a high-potential, capable candidate who is mistakenly not selected. Identify the specific "selection mistake" for each candidate.

Solution: 1. Candidate A represents an "Acceptance Error" (the "primary risk"). 2. Candidate B represents a "Reject Error" (a "missed opportunity").

Why: This tests the distinction between the primary risk of a selection error (hiring a failure) and the secondary risk of a rejected opportunity.

Lecture 22 (2026-08-23)

Topic: Internal Equity and Pay Structure

Logic: Internal equity ensures fairness in pay across different roles and levels within the same organization. A lack of formal salary bands and individual negotiation leads to pay inequity.

Practice Question: At TechNova, a senior employee (Priya) discovers a new hire (Arjun) earns 25% more for similar skills because decisions were made individually without formal salary bands. Based on the notes, what specific compensation management issues are present?

Solution: 1. Pay inequity (lack of internal equity). 2. Absence of formal salary bands.

Why: This tests the application of "internal equity" and "salary bands" to the specific conflict in the TechNova case.

Lecture 23 (2026-08-30)

Topic: Performance Appraisal vs. Performance Management and Rating Biases

Logic: Performance Management is a multi-pronged, collaborative, and forward-looking system including "outputs and being," while Performance Appraisal is a retrospective, individual-focused assessment. Raters must distinguish between specific biases such as "Status Effect" (underrating roles perceived as "lesser") and "Spillover" (past ratings influencing the current year's data).

Practice Question: A manager evaluates two staff members: a data entry clerk and a supervisor. The manager rates the clerk as "average" because the role is perceived as "lesser" (despite the clerk's performance), and the manager rates the supervisor as "high" based on a project completed during the previous year. Identify the two specific types of bias occurring in these assessments.

Solution: 1. Data entry clerk: **Status Effect** (underrating a role perceived as "lesser"). 2. Supervisor: **Spillover Effect** (past performance ratings influencing current year's data).

Why: This tests the ability to differentiate between a bias based on a worker's position (Status) versus a bias based on historical data (Spillover).

Lecture 24 (2026-08-30)

Topic: Performance Appraisal Methods

Logic: The Checklist Method is "easy to use" and "low cost," but it is highly susceptible to "Subjectivity" and the "Halo Effect," where a single recent observation or a specific trait can disproportionately influence the rater's perception of the entire role. In contrast, the Behaviorally Anchored Rating Scale (BARS) provides a clearer "anchor" for the rater by using a range of descriptive statements of behavior.

Practice Question: A manager uses a "Yes/No" checklist to evaluate a subordinate. Because the subordinate recently completed one high-priority project successfully, the manager gives them high marks across all categories—including "keeping temper" and "obeying orders"—even though the manager has no specific data on those behaviors. Identify the specific risk the manager is falling into and name the appraisal method that uses a range of descriptive statements of behavior to provide a clearer "anchor" for the rater.

Solution: 1. The manager is falling into the **Halo Effect**, where a single recent observation or specific trait disproportionately influences the rater's perception of the entire role. 2. The manager should use the **Behaviorally Anchored Rating Scale (BARS)** to provide a clearer "anchor."

Why: This tests the identification of the "Halo Effect" risk associated with the Checklist Method versus the "anchored" approach of BARS.

Harvard Case Study

Surviving the boss from hell

David – the protagonist Thaddeus – his boss, nicknamed Commodore by David and team given Ex-military background Favourite statements – “We’ve got a lot to do” , “ We have got big responsibilities”

Calls an emergency meeting Goes round the table, person by person reminding that they have lots to do Takes update of the stuff he gets otherwise through regular emails/reports Steve - colleague of David , repeatedly reiterates “as you have approved” “as you asked us to” – method/staretegy developed to manage Commodore Marissa – presents herself insanely cranky to keep Commodore from asking her anything

Surviving the boss from hell

Calls an emergency meeting..... Skips David after having called him . David cancels his meeting with Irving and rushes to the meeting called by his boss At the end of the meeting praises an intern who arranged his cabinets well!! He was unempathetic when David suffered a back injury – pointed out David to change the font colour from Dark red to light red, to put 6 charts in a page, corrects his grammar and mocks him!!

Surviving the boss from hell

Irving – an EVP – a peer of Thaddeus or Commodore He is famous for his informal dress code – he wears a tie with Shrek in it, also stained with coffee David rushes to meet Irving thinking of rescheduling his meeting!! Fortunately Irving rushes to a leadership committee meeting and has comfortably forgotten the meeting with David Irving is seen carrying David’s dashboard to leadership committee . David is proud and happy to see that

Surviving the boss from hell

Irving send an envelope through Irma his EA It's an offer letter – It is a horizontal move – same pay , same level –just not working for the Commodore

Irving will be better than the Commodore! You should go for it!

If you don't get more money when you change then you will never get a raise!!

Commodore became a downward-focussed micromanager when he lost hope for his own career.

Surviving the boss from hell

Should David make a lateral move with uncertain prospects and a boss he does not know?

Where can we place Thaddeus in the Dark Triad ? Where do you see David in the employee engagement quadrant ?

Attitude and Perception

Do you think David is paying through emotional labour?

Emotions and moods

Selective perception by David in perceiving his boss? Horns effect in play? “Micromanaging is overriding other abilities as a manger?

Perceptions and Decision making

Where is David in Maslow's Hierarchy of Needs ? McClelland's theory in play?

Motivation

Surviving the boss from hell

Should David make a lateral move with uncertain prospects and a boss he does not know?

Irving a better boss ? Reliable sources – colleagues, ex-employees Find out from Irving himself about growth Lateral move – More people reporting Irving more room to maneuver and advance

Yes – Go for a lateral move

Dead end – no raise , no promotion . If the boss not moving up will David move up? A lateral move can challenge David's relationship with Thaddeus ?!

No – should not go for a lateral move

Can informal network of colleagues suffering under a bad boss help David survive, with some coping strategies? What about the mental and physical well-being . Does the stress of his boss gets passed onto the family? Apart from caricaturing him as “commodore” can David try confronting his boss Thaddeus politely but diplomatically drawing boundaries? Good leaders can do rude things – learning how to have difficult yet important conversations with your boss in a socially acceptable way is a critical career skill!! ? Can David carve out a new role for himself – capitalizing on his expertise in creating dashboards!! A Centre of Excellence (CoE) on creating dashboards with juniors reporting to him?!

Some grey areas....

Thank you

MBA ZG511, Managing People and Organizations

IIMA Case Study

Vasudha's dismay

Praxum is into Investment solutions and retirement expertise to Banks, Sovereign wealth funds, large corporates 6500 employees offices in 25 countries and manages ~\$300 billion

HR supports and partners strategically with all business areas Actively engaged in Organizational development , employee engagement , performance management etc. PSL had a collaborative culture – knowledge sharing between teams, mentoring and coaching programmes were applied extensively A good pay master, flexible work timings, sound employee centric policies which made it a sought after places to work

Vasudha's dismay

Background Vetting team – called Investigation and Intelligence cell Typical HR interview – professional and personal details discussed – biases possible BV team – no interface with candidates, hence a fairer evaluation, verify credentials, handle confidential data etc. sans bias BV team faced the pressure from HR to hasten the BV process Hence to withstand the coercion from HR and do a thorough check BV team needed individuals with strong commitment, self-motivation and those who could follow process-oriented structure diligently

Vasudha Kumar , Headed the BV team in India at Praxum Services MBA from Delhi University, Experience at a Multinational consulting firm Joined PSL in 2015 as the first permanent employee of the BV team. She received lot of commendations in a short span of time. Vasudha believed in cherry picking her team since the BV role cannot be given to anybody Small team of 4 with high responsibility and commitment – not nickel and dime stuff

Vasudha's dismay

A junior Avi Ahuja was hired in 2015 – MBA from premier institute in Delhi 2 months of knowledge transfer, lot of technical know-how before anyone got to handle important data and client Vasudha and Avi managed most of the work between the two of them , but hired freshers in course of time Vasudha, delegated work appropriately, kept her expectations clear but at the same time gave them autonomy, Ms.Kumar was never intruding and gave space to her team to increase their sense of ownership and responsibility Kumar and Ahuja shared a great camaraderie. Ahuja learnt quickly, was able to manage critical decisions. Developed expertise with Kumar's guidance. Kumar and Ahuja shared a great bonding and understanding of each other's expectation at work. They both set an example of an extraordinary superior-subordinate relationship Vasudha Kumar had planned her maternity leave and was rest assured that her team was well prepared to handle the criticality of the BV team's demands

Vasudha's dismay

Just 4 days before her maternity leave, Vasudha received an email in her inbox – Avi Ahuja's resignation Ms. Kumar was dejected to the core. Avi had always mentioned that she was happy and in fact privileged to work under a supervisor and mentor like Kumar. Mansi, one of Avi's friends mentioned that Ms.Ahuja had got a lucrative offer with a 30% hike in salary

Discussion Questions

What should Vasudha Kumar do? What are the options? How can one communicate effectively in such difficult situations? What are the underlying challenges of managing new age workforce? Factors impacting employee motivation? Implications of (personal and professional) of Ahuja's actions on her career?

Thank you

Sample paper - MidSem.docx

1. Fred Luthans' research revealed that effective managers spend most of their time in communication and human resource management activities. List any 5 key activities that effective managers perform, with explanations of how each contributes to managerial and organizational effectiveness. (5)

This is a subjective question, and hence, the answers are not fixed. Any 5 valid points (activities) related to Communication and Human Resources Management, are acceptable. The student should also add one liner of valid explanation of the contribution for each of these 5 activities. Thus, 5 valid activities (5 x 0.5 Mark) and 5 corresponding valid contributions (5 x 0.5 Mark) together will fetch 5 marks for the student.

The following is the central theme for communication and HRM related activities.

Communication: Exchanging routine information and processing paperwork, choosing effective communication channels

Human Resource Management: Motivating, disciplining, managing/resolving conflicts, staffing, and training, directing employees

Communicating Expectations and Goals: Ensures alignment between individual efforts and organizational goals, reducing confusion, preventing wasted effort, and increasing productivity.

Listening and Providing Feedback: Builds trust, enhances employee engagement, and helps employees correct course early, leading to improved performance and morale.

Coaching and Mentoring: Increases employee competence and confidence, leading to higher productivity and better succession planning.

Motivating and Inspiring: Motivated employees are more committed, take ownership of their work, and are more willing to go the extra mile—improving retention and performance.

Conflict Resolution: Maintains a positive work environment, prevents disruptions, and ensures focus on organizational objectives.

Building and Maintaining Relationships with team: Fosters collaboration, facilitates information flow, and enhances teamwork, which boosts overall organizational effectiveness.

Developing the Team: Enhances the team's capabilities, prepares them for future challenges, and supports organizational adaptability in a changing environment by training and developing them on continual basis.

Full marks can be given

Ritu recently joined Pragya Solutions as HR Manager. The organization has employees from multiple states in India, including Tamil Nadu, Punjab, Gujarat, and Assam. Ritu observes that people tend to form groups based on their language and regional background. This leads to subtle exclusion during brainstorming sessions, where team members prefer conversing in their regional language. Project updates are often misunderstood due to differences in communication styles. Some employees perceive favoritism in promotions, as decision-making panels unintentionally favor candidates who share similar

backgrounds. As a result, collaboration between departments has declined, project deadlines are slipping, and employee morale is falling. Ritu realizes the need for an inclusive work culture but also knows that changing established habits will require sustained effort.

Identify the key issues faced by the organization and what Ritu would do (5 marks)

Synoptic Answer:

Key Issues: Regional diversity barriers, lack of inclusive communication, possible unconscious bias.

Solution: Implement diversity management strategies – bias training, inclusive meetings, mentoring programs, and ERGs. Leadership should model inclusive behavior.

Outcome: Improved collaboration, reduced communication gaps, and increased innovation.

Maximum 4 marks can be given

1. Answer the following questions based on Perception and Decision Making (5).

a) Explain briefly the determining factors of Attribution Theory. (3 marks)

A) Attribution Theory suggests that we judge people differently determining whether an individual's behavior is internally or externally caused. The determination depends on 3 factors:

Distinctiveness – different behavior in different situations

Consensus - does the same as the majority of the population does

Consistency – always behaves the same way

b) Name any 4 biases or errors in decision making ($4 \times 0.5 = 2$ marks)

Any of the following 4 is an acceptable answer:

Overconfidence Bias,

Anchoring Bias,

Confirmation Bias,

Availability Bias,

Escalation of Commitment,

Randomness Error,

Risk aversion and Hindsight Bias

Full marks can be given

A flight attendant is having a stressful day due to personal problems, but during the flight she continues to greet passengers warmly, smile, and speak politely, even when faced with rude behavior from some travelers. Her airline has strict customer service policies requiring staff to maintain a friendly, calm demeanor at all times.

Identify the type of emotional labour the flight attendant is displaying in this situation, and explain why it can be emotionally draining over time (5).

Answer: The flight attendant is engaging in surface acting — suppressing her true emotions and displaying emotions required by her job role, even though they do not match how she truly feels.

This can be emotionally draining over time because maintaining a “false” emotional display creates emotional dissonance — a gap between felt emotions and displayed emotions. Prolonged emotional dissonance can lead to stress, burnout, and reduced job satisfaction.

Full marks can be given

Q.5. Valerie Clark works as a campaigner at the Oceans Protection Foundation in Japan. During campaign implementation activities, she takes responsibility for milestones to be achieved and key project activities. Her colleagues and team members find that they can depend on her for support and guidance and admire her quality of never giving up on a challenge. Identify the category of personality Clark would most likely fit into according to the Big Five Personality Model. Justify. Don't write multiple answers. [5]

Answer: According to the Big Five model, she is a highly conscientious person. This is because she comes across as dependable, responsible, organized and persistent. Her colleagues find that she never gives up on challenges and is reliable in nature.

Full marks can be given

Q.6.

Explain the theory of motivation which proposes that the factors that lead to job satisfaction are separate and distinct from those that lead to job dissatisfaction. (5)

Answer: Herzberg's theory of motivation

According to Herzberg, the factors that lead to job satisfaction are separate and distinct from those that lead to job dissatisfaction. Therefore, managers who seek to eliminate factors that can create job dissatisfaction may bring about peace, but not necessarily motivation. They will be placating, rather than motivating, their workers. As a result, Herzberg characterized conditions such as quality of supervision, pay, company policies, physical working conditions, relationships with others, and job security as hygiene factors. When they're adequate, people will not be dissatisfied; neither will they be satisfied. If we want to motivate people on their jobs, Herzberg suggested emphasizing factors associated with the work itself or with outcomes directly derived from it, such as promotional opportunities, personal growth opportunities, recognition, responsibility, and achievement. These are the characteristics people find intrinsically rewarding.

Full marks can be given

Q.7.

Research suggests that financial incentives may be more motivating in the short-run, but in the long-run, non-financial incentives work best. What are your views on this? Explain. (5)

Sample Answer: Students may have different views on this. Maximum 4 marks can be given

The assertion that financial incentives are more motivating in the short-term while non-financial incentives work best long-term is largely supported by research. Financial incentives drive extrinsic motivation for immediate, measurable tasks, but their effect diminishes over time. Non-financial incentives, such as meaningful work, career growth, recognition, and a positive work environment, foster intrinsic motivation and lasting engagement, leading to sustained commitment and higher job satisfaction. Therefore, a balanced approach using both financial and non-financial incentives is crucial for comprehensive and sustainable motivation
