Learning Objectives

- Describe the manager's functions, roles, and skills.
- Define organizational behavior (OB).
- Demonstrate why few absolutes apply to OB.
- Identify manager's challenges and opportunities in applying OB concepts.
- Describe the key employability skills gained from studying OB.

Organizational Behavior (OB)

OB is a field of study that investigates the impact that individuals, groups, and structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness.

- Motivation
- Leader behavior and power
- Interpersonal communication
- Group structure and processes
- Conflict and negotiation
- Work design

23

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Few Absolutes in OB

- Two people often act very differently in the same situation and the same person's behavior changes in different situations.

Jack Nelson's Problem

As a new member of the board of directors for a local bank, Jack Nelson was being introduced to all employees in the head office. When he was introduced to Ruth Johnson, he was curious about her work and asked her what her machine did. Johnson replied that she really did not know what the machine was called or what it did. She explained that she had been working there for only two months. She did, however, know precisely how to operate the machine. According to her line manager, she was an excellent employee.

BITS WLP | Generated: 16-Aug-2026 20:30:14

Jack Nelson's Problem

At one of the branch offices the line manager in charge spoke to Nelson confidentially, telling him that "something was wrong" but she did not know what. For one thing she explained that employee turnover was high, and no sooner had an employee been put on the job than another one resigned. With customers to see and loans to be made, she explained, she had little time to work with the new employees as they came and went.

All branch line managers hired their own employees without communication with the head office or other branches. When an opening developed, the line manager tried to find a suitable employee to replace the worker who had quit.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Jack Nelson's Problem

After touring the 22 branches and finding similar problems in many of them, Nelson wondered what the head office should or what action should be taken. The organization was generally regarded as being a well-run institution that had grown from 275 to 794 employee during the last ten years. The more he thought about the matter, the more puzzled Nelson became. He couldn't quite put his finger on the problem, and he didn't know whether to report his findings to the company chairman.

Surface-level diversity

Deep-level diversity

Diversity Management

Levels of Diversity - Example

• A and B are co-workers who seem to have little in common at first glance. A is a young, recently hired male college graduate with a business degree, raised in a Punjabi speaking neighborhood in Bangalore. B is an older, long tenured woman raised in rural Meerut, who achieved her current level in the organization by starting as a high school graduate and working her way through the hierarchy.

• At first, these co-workers may experience some differences in communication based on their differences in education, ethnicity, regional background, and gender.

• As they get to know one another, they may find they share a common way of thinking about important work problems, like to work collaboratively, etc...

Biographical Characteristics

- Age
- Gender
- Race

Job Attitudes

- Job Satisfaction
- Job Involvement
- Organizational Commitment
- Perceived Organizational Support
- Employee Engagement

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Job Satisfaction

- One of the primary job attitudes measured.
 - Broad term involving a complex individual summation of a number of discrete job elements.
- How to measure?
 - Single global rating (one question/one answer)
 - Summation score (many questions/one average)
- Are people satisfied in their jobs?

Causes of Job Satisfaction

- Job Conditions
- Pay
- Personality
- CSR

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Outcomes of Job Satisfaction

- Job Performance
- Organizational Citizenship Behavior (OCB)
- Customer Satisfaction

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Employee Responses to Dissatisfaction

Assess your Job Satisfaction: Use the following scales

1. Extremely dissatisfied
2. Dissatisfied
3. Slightly dissatisfied
4. Neutral
5. Slightly satisfied
6. Satisfied
7. Extremely satisfied

Exercise: Assess Your Job Satisfaction

1. The amount of job security I have.
2. The amount of pay and fringe benefits I receive.
3. The amount of personal growth and development I get in doing my job.
4. The people I talk to and work on my job.
5. The degree of respect and fair treatment I receive from my boss.
6. The feeling of worthwhile accomplishment I get from doing my job.
7. The chance to get to know other people while on the job.

Exercise: Assess Your Job Satisfaction

8. The amount of support and guidance I receive from my supervisor.
9. The degree to which I am fairly paid for what I contribute to this organization.
10. The amount of independent thoughts and action I can exercise in my job.
11. How secure things look for me in future in this organization.
12. The chance to help other people while at work.
13. The amount of challenge in my job.
14. The overall quality of the supervision I received on my work.

THANK YOU

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Learning Objectives

- Define personality, describe how it is measured, and explain the factors that determine an individual's personality
- Describe the Myers-Briggs Type Indicator personality framework and assess its strengths and weaknesses
- Identify the key traits in the Big Five personality model
- The Dark Triad
- Hofstede's Five Value Dimensions of National Culture
- GLOBE framework

Does anyone don't know their name ?

Answer would most probably be NO !

Because they have personality and values attached to them

What Is Personality?

The dynamic organization within the individual of those psychophysical systems that determine his unique adjustments to his environment. - Gordon Allport

- **The sum of ways in which an individual reacts to and interacts with others**

5

Personality Determinants

- Heredity

- Personality Traits

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

6

The Myers-Briggs Type Indicator

- Most widely used instrument in the world.
- Participants are classified on four axes to determine one of 16 possible personality types, such as ENTJ.

7

Personality Test-MBTI

<https://www.youtube.com/watch?v=QKnNO5pxRGQ>

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

(Read for 16 MBTI types: <http://www.myersbriggs.org/my-mbti-personality-type/mbti-basics/the-16-mbti-types.htm?bhcp=1>)

8

The Types and Their Uses

- Each of the sixteen possible combinations has a name, for instance:
 - Visionaries (INTJ): original, stubborn, and driven
 - Organizers (ESTJ): realistic, logical, analytical, and businesslike
 - Conceptualizers (ENTP): entrepreneurial, innovative, individualistic, and resourceful
- Research results on validity mixed
 - MBTI® is a good tool for self-awareness and counseling.
 - Should *not* be used as a selection test for job candidates.

(Read: <https://www.forbes.com/sites/toddessig/2014/09/29/the-mysterious-popularity-of-the-meaningless-myers-briggs-mbti/#3069b6151c79>)

9

The Big Five Personality Model

- Sociable, gregarious, and assertive
- Good-natured, cooperative, and trusting
- Responsible, dependable, persistent, and organized
- Calm, self-confident, secure under stress (positive), versus nervous, depressed, and insecure under stress (negative)
- Curious, imaginative, artistic, and sensitive

10

OCEAN traits

<https://www.youtube.com/watch?v=D2befiHVpU>

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

11

How Do the Big Five Traits Predict Behavior?

- Research has shown this to be a better framework.
- Certain traits have been shown to strongly relate to higher job performance:
 - Highly conscientious people develop more job knowledge, exert greater effort, and have better performance.
 - Other Big Five Traits also have implications for work.
 - Emotional stability is related to job satisfaction.
 - Extroverts tend to be happier in their jobs and have good social skills.
 - Open people are more creative and can be good leaders.
 - Agreeable people are good in social settings.

12

How Big Five Traits influence OB Criteria?

13

The Dark Triad

1. **Machiavellianism** – the degree to which an individual is pragmatic, maintains emotional distance, and believes that ends can justify means.
2. **Narcissism** – the tendency to be arrogant, have a grandiose sense of self-importance, require excessive admiration, and have a sense of entitlement.
3. **Psychopathy** – the tendency for a lack of concern for others and a lack of guilt or remorse when their actions cause harm.

14

Values: Terminal and Instrumental

- **Values** – basic convictions about what is right, good, or desirable.
- The Importance and Organization of Values
 - Values lay the foundation for understanding of attitudes and motivation.
 - Values generally influence attitudes and behaviors.
- **Terminal values** – desirable end-states of existence.
- **Instrumental values** – preferred modes of behavior or means of achieving terminal values.

15

Hofstede's Framework

- Power distance
- Individualism versus collectivism
- Masculinity versus femininity
- Uncertainty avoidance
- Long-term versus short-term orientation

16

Findings based on Hofstede's Framework

- Highest Power distance - Malaysia (than in any other country)
 - The most individualistic nation of all - USA
 - The most collectivistic nation - Guatemala
 - Highest masculinity rank – Japan
 - Highest femininity rank – Sweden
 - Highest in uncertainty avoidance – Greece
 - Lowest in uncertainty avoidance – Singapore
 - Longest-term orientation – Hongkong
 - Shortest-term orientation – Pakistan
-
- India scores high on power distance, medium on individualism-collectivism and uncertainty avoidance, and a little above medium on masculinity.

17

Case: On the Costs of Being Nice

- Agreeable people tend to be kinder and more accommodating in social situations, which you might think could add to their success in life. However, one downside of agreeableness is potentially lower earnings. Recent research has shown the answer to this and other puzzles; some of them may surprise you.
- First, and perhaps most obvious, agreeable individuals are less adept at a type of negotiation called distributive bargaining. Distributive bargaining is less about creating win-win solutions and more about claiming as large of a share of the pie as possible. Because salary negotiations are generally distributive, agreeable individuals often negotiate lower salaries for themselves than they might otherwise get. Perhaps because of this impaired ability to negotiate distributively, agreeable individuals have lower credit scores.

19

Global Leadership and Organizational Behavior Effectiveness (GLOBE)

- Power Distance
- Institutional Collectivism
- Uncertainty avoidance
- Future Orientation
- In-Group Collectivism
- Gender Egalitarianism
- Assertiveness
- Humane Orientation
- Performance Orientation

18

Case: On the Costs of Being Nice

- Second, agreeable individuals may choose to work in industries or occupations that earn lower salaries, such as the “caring” industries of education or healthcare. Agreeable individuals are also attracted to jobs both in the public sector and in non-profit organizations.
- Third, the earnings of agreeable individuals also may be reduced by their lower drive to emerge as leaders, and by their tendency to engage in lower degrees of proactive task behaviors, such as coming up with ways to increase organizational effectiveness.
- While being agreeable certainly doesn't appear to help one's pay, it does provide other benefits. Agreeable individuals are better liked at work, are more likely to help others at work, and generally are happier at work and in life.
- Nice guys—and gals—may finish last in terms of earnings, but wages themselves do not define a happy life, and on that front, agreeable individuals have the advantage.

20

Question

- Do you think employers must choose between agreeable employees and top performers? Why or why not?

Question

- Often, the effects of personality depend on the situation. Can you think of some job situations in which agreeableness is an important virtue?

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

23

BITS WILP | Generated: 16-Aug-2026 20:30:14 BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

Solution

- Do you think employers must choose between agreeable employees and top performers? Why or why not?
- Although a contradiction appears in these relationships, there may not be. In the natural state, the agreeable employee may not be as productive as the disagreeable employee, but with the appropriate training and leadership application, the agreeable employee could be motivated to greater success.

22

BITS WILP | Generated: 16-Aug-2026 20:30:14 BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

Solution

- Often, the effects of personality depend on the situation. Can you think of some job situations in which agreeableness is an important virtue?
- We may see relationship positions such as sales or customer service as more appropriate to agreeable people. Disagreeable people might be more appropriate to job needs seeking isolation of the worker, such as assembly work or accounting.

24

BITS WILP | Generated: 16-Aug-2026 20:30:14

Learning Objectives

After studying this chapter, you should be able to:

- Define perception and explain the factors that influence it.
- Explain attribution theory, and list the three determinants of attribution.
- Identify the shortcuts individuals use in making judgments about others.
- Contrast the rational model of decision making with bounded rationality and intuition.
- Common Biases and Errors in Decision Making
- Contrast the three ethical decision criteria.

3

BITS WILP | Generated: 16-Aug-2026 20:30:14 BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

What Is Perception?

- **Perception is a process by which individuals organize and interpret their sensory impressions in order to give meaning to their environment.**
- It is important to the study of OB because people's behaviors are based on their perception of what reality is, not on reality itself

4

Factors That Influence Perception

Exhibit 6-1 Factors That Influence Perception

5

Attribution Theory

Attribution theory suggests that when we observe an individual's behavior, we attempt to determine whether it was internally or externally caused.

Determination depends on three factors:

- Distinctiveness
- Consensus
- Consistency

Clarification of the differences between internal and external causation

- **Internally caused** – those that are believed to be under the personal control of the individual.
- **Externally caused** – resulting from outside causes

6

Attribution Theory

Fundamental Attribution Error- The tendency to underestimate the influence of external factors and overestimate the influence of internal factor when making judgements about the behavior of others.

7

Common Shortcuts in Judging Others

- Selective perception
- Halo & Horns effect
- Contrast Effect
- Stereotyping

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

8

Decision Making

- **Problem**
 - A perceived discrepancy between the current state of affairs and a desired state
- **Decisions**
 - Choices made from among alternatives developed from data
- **Perception Linkage:**
 - All elements of problem identification and the decision-making process are influenced by perception.
 - Problems must be recognized.
 - Data must be selected and evaluated.

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

9

Types of Decision-Making

- Rational Decision Making
- Bounded Rationality
- Intuition

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

10

Six Steps of Rationality Model

Exhibit 6-3 Steps in the Rational Decision-Making Model

1. Define the problem.
2. Identify the decision criteria.
3. Allocate weights to the criteria.
4. Develop the alternatives.
5. Evaluate the alternatives.
6. Select the best alternative.

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

11

Common Biases and Errors in DM

- Overconfidence Bias
- Anchoring Bias
- Confirmation Bias
- Availability Bias
- Escalation of Commitment
- Randomness Error
- Hindsight Bias

Managing People and Organizations

MBA ZG511 Lecture No. 6

Learning Objectives

- Differentiate between emotions and moods
- Identify the sources of emotions and moods
- Impact of Emotional Labor
- Affective Events Theory (AET)
- Emotional Intelligence
- OB Applications of Emotions and Moods

What are Emotions and Moods?

Exhibit 4-1 Affect, Emotions, and Moods

Six Essentially Universal Emotions

- Anger
- Fear
- Sadness
- Happiness
- Disgust
- Surprise

Moral Emotions

- **Moral emotions:** emotions that have moral implications because of our instant judgement of the situation that evokes them.
 - Our responses to moral emotions differ from our responses to other emotions.
 - Moral emotions are developed during childhood.
 - Because morality is a construct that differs between cultures, so do moral emotions.

Basic Moods: Positive and Negative Affect

- Emotions cannot be neutral. Being neutral means non emotional.
- Emotions when categorized (i.e. +ve or -ve) reflect "mood states".
- Mood states affect perception

Sources of Emotions and Moods

- Personality
- Time of Day
- Day of the Week
- Weather
- Stress
- Social Activities

Sources of Emotions and Moods (contd.)

- Sleep
- Exercise
- Age
- Gender

Emotional Labor

An employee's expression of organizationally desired emotions during interpersonal transactions at work.

•Emotional Dissonance

Inconsistencies between the emotions people feel and the emotions they project

•Types of Emotions:

Felt: the individual's actual emotions

Displayed: Emotions that are organizationally required or considered appropriate in a given job

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Emotional Labor

Displaying Fake Emotions: We "act" to keep our job

Surface Acting

Hiding one's inner feelings and giving up emotional expressions in response to display rules.

Deep Acting

Trying to modify one's true inner feelings based on display rules.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Affective Events Theory

• **Affective events theory (AET):** employees react emotionally to things that happen to them at work and this influences job performance and satisfaction.

– Emotions provide valuable insights into how workplace events influence employee performance and satisfaction.

– Employees and managers shouldn't ignore emotions or the events that cause them, even when they appear minor, because they accumulate.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Describe Emotional Intelligence (1 of 2)

A person's ability to:

- Perceive emotions in the self and others.
- Understand the meaning of these emotions.
- Regulate one's emotions accordingly in a cascading model.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

OB Applications of Emotions and Moods

- The Selection Process
- Decision Making
- Creativity
- Motivation
- Leadership
- Negotiation
- Customer Service
- Work-Life Satisfaction
- Deviant Workplace Behaviors
- Safety and Injury at Work

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Implications for Managers (1 of 2)

- Recognize that emotions are a natural part of the workplace and good management does not mean creating an emotion-free environment.
- To foster effective decision making, creativity, and motivation in employees, look to model positive emotions and moods as much as is authentically possible.
- Provide positive feedback to increase the positivity of employees. Of course, it also helps to hire people who are predisposed to positive moods.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Implications for Managers (2 of 2)

- In the service sector, encourage positive displays of emotion, which make customers feel more positive and thus, improve customer service interactions and negotiations.
- Understand the role of emotions and moods to significantly improve your ability to explain and predict your coworkers' and others' behavior.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Case: Is It Okay to Cry at Work?

As this chapter has shown, emotions are an inevitable part of people's behavior at work. At the same time, it's not entirely clear that we've reached a point where people feel comfortable expressing *all* emotions at work. The reason might be that business culture and etiquette remain poorly suited to handling overt emotional displays. The question is, can organizations become more intelligent about emotional management? Is it ever appropriate to yell, laugh, or cry at work?

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Case: Is It Okay to Cry at Work?

- Some people are skeptical about the virtues of more emotional displays at the workplace. As the chapter notes, emotions are automatic physiological responses to the environment, and as such, they can be difficult to control appropriately. One 22-year-old customer service representative named Laura, who was the subject of a case study, noted that fear and anger were routinely used as methods to control employees, and employees deeply resented this use of emotions to manipulate them. In another case, the chairman of a major television network made a practice of screaming at employees whenever anything went wrong, leading to badly hurt feelings and a lack of loyalty to the organization. Like Laura, workers at this organization were hesitant to show their true reactions to these emotional outbursts for fear of being branded as "weak" or "ineffectual." It might seem like these individuals worked in heavily emotional workplaces, but in fact, only a narrow range of emotions was deemed acceptable. Anger appears to be more acceptable than sadness in many organizations, and anger can have serious maladaptive consequences.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Case: Is It Okay to Cry at Work?

- Others believe organizations that recognize and work with emotions effectively are more creative, satisfying, and productive. For example, Laura noted that if she could express her hurt feelings without fear, she would be much more satisfied with her work. In other words, the problem with Laura's organization is not that emotions are displayed, but that emotional displays are handled poorly. Others note that use of emotional knowledge, like being able to read and understand the reactions of others, is crucial for workers ranging from salespeople and customer service agents all the way to managers and executives. One survey even found that 88% of workers feel being sensitive to the emotions of others is an asset. Management consultant Erika Anderson notes, "Crying at work is transformative and can open the door to change." The question then is, "Can organizations take specific steps to become better at allowing emotional displays without opening a Pandora's box of outbursts?"

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Question

- What factors do you think make some organizations ineffective at managing emotions?

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Solution

- Emotions and moods are a natural part of an individual's makeup. Where managers err is in ignoring co-workers' and employees' emotions and assessing others' behavior as if it were completely rational. Managers who understand the role of emotions and moods will significantly improve their ability to explain and predict their co-workers' and employees' behavior.

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Question

- Research shows that acts of co-workers (37 percent) and management (22 percent) cause more negative emotions for employees than do acts of customers (7 percent). What can Laura's company do to change its emotional climate?

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Solution

- Laura's company can set up a training program for managers and others about the proper way to handle employees' emotional concerns as they are displayed. Since Laura's company recognizes displayed emotions, the initial difficulty in training personnel is overcome. From there, the company can focus on improving communication, training employees for development of Emotional Intelligence, and providing opportunities for open discussion of emotions with prepared and concerned managers.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Learning Objectives

- Define motivation.
- Compare and contrast early theories of motivation.
- Compare and contrast contemporary theories of motivation.

What Is Motivation?

- Motivation
 - Is the result of an interaction between the person and a situation; it is not a personal trait.
 - Is the process by which a person's efforts are energized, directed, and sustained towards attaining a goal.
 - **Energy:** a measure of intensity or drive.
 - **Direction:** toward organizational goals
 - **Persistence:** exerting effort to achieve goals.
 - Motivation works best when individual needs are compatible with organizational goals.

Early Theories of Motivation

- Maslow's Hierarchy of Needs
- Herzberg's Two-Factor Theory
- McClelland's Three Needs Theory

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Early Theories of Motivation

- Maslow's Hierarchy of Needs Theory
 - Needs were categorized as five levels of lower- to higher-order needs.
 - Individuals must satisfy lower-order needs before they can satisfy higher order needs.
 - Satisfied needs will no longer motivate.
 - Motivating a person depends on knowing at what level that person is on the hierarchy.
 - Hierarchy of needs
 - Lower-order (external): physiological, safety
 - Higher-order (internal): social, esteem, self-actualization

Exhibit 1 Maslow's Hierarchy of Needs

Early Theories of Motivation

- Herzberg's Motivation-Hygiene Theory
 - Job satisfaction and job dissatisfaction are created by different factors.
 - **Hygiene factors:** extrinsic (environmental) factors that create job dissatisfaction.
 - **Motivators:** intrinsic (psychological) factors that create job satisfaction.
 - Attempted to explain why job satisfaction does not result in increased performance.
 - The opposite of satisfaction is not dissatisfaction, but rather no satisfaction.

Exhibit 2 Herzberg's Motivation-Hygiene Theory

Exhibit 3 Contrasting Views of Satisfaction-Dissatisfaction

Motivation and Needs

• Three-Needs Theory (McClelland)

– There are three major acquired needs that are major motives in work.

• Need for achievement (nAch)

– The drive to excel and succeed

• Need for power (nPow)

– The need to influence the behavior of others

• Need of affiliation (nAff)

– The desire for interpersonal relationships

Exhibit 4 Examples of Pictures Used for Assessing Levels of nAch, nAff, and nPow

nAch: Indicated by someone in the story wanting to perform or do something better.
nAff: Indicated by someone in the story wanting to be someone else and enjoy mutual friendship.
nPow: Indicated by someone in the story desiring to have an impact or make an impression on others in the story.

Contemporary Theories of Motivation

- Goal-Setting Theory
- Reinforcement Theory
- Equity Theory
- Expectancy Theory

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS WLP | General BITS Pilani Deemed to be University under Section 3 of UGC Act, 1956

Exhibit 5 Goal-Setting Theory

BITS WLP | General BITS Pilani Deemed to be University under Section 3 of UGC Act, 1956

Motivation and Goals

- Goal-Setting Theory
 - Proposes that setting goals that are accepted, specific, and challenging yet achievable will result in higher performance than having no or easy goals.
 - Is culture bound to the U.S. and Canada.
- Benefits of Participation in Goal-Setting
 - Increases the acceptance of goals.
 - Fosters commitment to difficult, public goals.
 - Provides for self-feedback (internal locus of control) that guides behavior and motivates performance (self-efficacy).

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS WLP | General BITS Pilani Deemed to be University under Section 3 of UGC Act, 1956

Motivation and Behavior

- Reinforcement Theory
 - Assumes that a desired behavior is a function of its consequences, is externally caused, and if reinforced, is likely to be repeated.
 - Positive reinforcement is preferred for its long-term effects on performance.
 - Ignoring undesired behavior is better than punishment which may create additional dysfunctional behaviors.

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

BITS WLP | General BITS Pilani Deemed to be University under Section 3 of UGC Act, 1956

Equity Theory

– Proposes that employees perceive what they get from a job situation (outcomes) in relation to what they put in (inputs) and then compare their inputs-outcomes ratio with the inputs-outcomes ratios of relevant others.

- If the ratios are perceived as equal then a state of equity (fairness) exists.
- If the ratios are perceived as unequal, inequity exists and the person feels under- or over-rewarded.
- When inequities occur, employees will attempt to do something to rebalance the ratios (seek justice).

Exhibit 6 Equity Theory

Perceived Ratio Comparison^a

Employee's Assessment

$$\frac{\text{Outcomes A}}{\text{Inputs A}} < \frac{\text{Outcomes B}}{\text{Inputs B}}$$

Inequity (underrewarded)

$$\frac{\text{Outcomes A}}{\text{Inputs A}} = \frac{\text{Outcomes B}}{\text{Inputs B}}$$

Equity

$$\frac{\text{Outcomes A}}{\text{Inputs A}} > \frac{\text{Outcomes B}}{\text{Inputs B}}$$

Inequity (overrewarded)

^a Person A is the employee, and person B is a relevant other or referent.

Equity Theory (cont'd)

– Employee responses to perceived inequities:

- Distort own or others' ratios.
- Induce others to change their own inputs or outcomes.
- Change own inputs (increase or decrease efforts) or outcomes (seek greater rewards).
- Choose a different comparison (referent) other (person, systems, or self).
- Quit their job.

– Employees are concerned with both the absolute and relative nature of organizational rewards.

Equity Theory (cont'd)

– Distributive justice

- The perceived fairness of the amount and allocation of rewards among individuals (i.e., who received what).
 - Influences an employee's satisfaction.

– Procedural justice

- The perceived fairness of the process use to determine the distribution of rewards (i.e., how who received what).
 - Affects an employee's organizational commitment.

Expectancy Theory

- States that an individual tends to act in a certain way based on the expectation that the act will be followed by a given outcome and on the attractiveness of that outcome to the individual.
- Key to the theory is understanding and managing employee goals and the linkages among and between effort, performance and rewards.
 - **Effort:** employee abilities and training/development
 - **Performance:** valid appraisal systems
 - **Rewards (goals):** understanding employee needs

Expectancy Theory

- Expectancy Relationships
 - Expectancy (effort-performance linkage)
 - The perceived probability that an individual's effort will result in a certain level of performance.
 - Instrumentality
 - The perception that a particular level of performance will result in the attaining a desired outcome (reward).
 - Valence
 - The attractiveness/importance of the performance reward (outcome) to the individual.

Exhibit 7 Simplified Expectancy Model

Case Study 1

- The employees at Acme Toilets Inc. are not working as hard as Jill, their supervisor, would like. The salespeople aren't meeting their sales quotas, and Jill can't seem to motivate them to try harder. Jill has been studying expectancy theory and has decided to try to put it into practice.

Question 1

- Employees are never able to meet their sales quotas and believe that no matter how hard they work, they'll never meet them. They perceive the _____ of their success to be low.

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Question 1

- Employees are never able to meet their sales quotas and believe that no matter how hard they work, they'll never meet them. They perceive the _____ of their success to be low.

Case: Attaching the Carrot to the Stick

- It seems like common sense that people work harder when there are incentives at stake, but many scholars question this premise. Alfie Kohn has long suggested that workers are “punished by rewards” and urges that organizations avoid tying rewards to performance because of the negative consequences that can result. As an alternative to rewards, some experts recommend that managers foster a positive, upbeat work environment in hopes that enthusiasm will translate into motivation.

Case: Attaching the Carrot to the Stick

- Although rewards can be motivating, they can reduce employees' intrinsic interest in the tasks they are doing. Along these lines, Mark Lepper of Stanford University found that children rewarded for drawing with felt-tip pens no longer wished to use the pens at all when rewards were removed, whereas children who were not rewarded for using the pens were eager to use them. And neuroimaging researchers at Cal Tech found that when incentives reached a certain threshold, the brain's reward center began to shut down and people became distracted. According to Vikram Chib, the lead researcher on the project, people begin to worry about losing the carrot when the stakes get too high, which leads to failure.

Case: Attaching the Carrot to the Stick

- Rewards can also lead to misbehavior by workers. Psychologist Edward Deci notes, “Once you start making people's rewards dependent on outcomes rather than behaviors, the evidence is people will take the shortest route to those outcomes.” Consider factory workers paid purely based on the number of units they produce. Because only quantity is rewarded, workers may neglect quality. Executives rewarded strictly on the basis of the quarterly stock price will tend to ignore the long-term profitability and survival of the firm; they might even engage in illegal or unethical behavior to increase their compensation.

Case: Attaching the Carrot to the Stick

- Some rewards may also have legal implications. An increasing number of companies are providing financial rewards to employees who meet health goals or participate in wellness programs, but such efforts raise concerns about discrimination against those unable to reach the goals. Incentives might not motivate employees to take a more active role in managing their health in any case. As David Anderson, vice president and chief health officer at Stay-Well Health Management, says, “An incentive itself doesn't necessarily buy engagement. It buys compliance.”

Case: Attaching the Carrot to the Stick

- However, the majority of research cited in this and the previous chapter shows that individuals given rewards for behavior will be more likely to engage in the rewarded behaviors. It is also unlikely that individuals engaged in very boring, repetitive tasks will lose their intrinsic motivation if the task is rewarded, because they never had any intrinsic motivation to begin with. The real issue for managers is finding an appropriate way to reward behaviors so desired behavior is increased while less-desired behavior is reduced.

Questions

- Do you think that, as a manager, you would use bonuses regularly? Why or why not?
- Can you think of a time in your own life when being evaluated and rewarded on a specific goal lead you to engage in negative or unproductive behavior?
- What employee behaviors do you think might be best encouraged by offering incentive rewards?

Stages of Group Development

Punctuated Equilibrium Model

Performance (High/Low) vs Time (A, (A+B)/2, B). The graph shows a period of low performance (Phase 1) followed by a sharp increase (Transition) and a period of high performance (Phase 2) leading to completion.

- Long periods of inertia interspersed with revolutionary changes triggered by deadline
- Suited for temporary task groups on a finite deadline

Alternate Model

- Forming
- Storming – conflict resolution
- Norming - agree on roles and decisions
- Performing – members work collaboratively

BITS WLP | Generated: 16-Aug-2026 20:30:14

Group Properties

1. Roles
2. Norms
3. Status
4. Size and dynamics
5. Cohesiveness
6. Diversity

Group Properties - Roles

- **Role** Function occupied by someone occupying a given position in a group
- **Role Perception** Individual's view of how they should act in a given situation
- **Role Expectations – Psychological contract** How other's believe an individual should act in a given situation
- **Role Conflict** Individual is confronted by divergent rôle expectations

Group Properties - Status

★ **Status** – a socially defined position or rank given to groups or group members by others

➤ **Status characteristics theory** – differences in status characteristics create status hierarchies within groups

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

- Status is derived from one of three sources:
 - The power a person wields over others
 - A person's ability to contribute to a group's goals
 - An individual's personal characteristics

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Group Properties - Size

- Group size affects the group's overall behavior
- Social loafing** – the tendency for individuals to expend less effort when working collectively than alone
- Small groups (3–7 members)** → Better for decision making and participation
- Large groups (10+ members)** → Better for generating diverse ideas but may suffer from social loafing

Group Decision Making

Strengths

- More complete information and knowledge accuracy
- Diversity of views - creativity
- Acceptance of a solution

Weaknesses

- Time consuming
- Conformity pressures
- Dominated by one or few members
- Diluted responsibility/accountability

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Group Decision Making Techniques

Interacting groups

- Members meet face to face
- Interacting groups often censor themselves and pressure individual members towards conformity

Brainstorming

- People sit around a table, group leader states the problem
- Members freewheel as many alternatives as they can in a given length of time
- No criticism is allowed

Nominal group technique

- Each member writes his ideas, followed by silence presents his idea
- Group discusses and gets clarity
- Rank-orders the ideas, idea with highest aggregate determines final decision

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

BITS WLP | Generated: 16-Aug-2026 20:30:14

Group Decision Making Techniques

Effectiveness Criteria	Interacting	Brainstorming	Nominal
Number and quality of ideas	Low	Moderate	High
Social pressure	High	Low	Moderate
Money costs	Low	Low	Low
Speed	Moderate	Moderate	Moderate
Task orientation	Low	High	High
Potential for interpersonal conflict	High	Low	Moderate
Commitment to solution	High	Not applicable	Moderate
Development of group cohesiveness	High	High	Moderate

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

Implications

- Pay attention to roles norms and cohesion
- Use larger groups for factfinding and smaller groups for action taking tasks

Case – The Calamities of Consensus

When it is time for groups to reach a decision, many turn to consensus. Consensus, a situation of agreement, seems like a good idea. To achieve consensus, groups must cooperate and collaborate, which ultimately will produce higher levels of camaraderie and trust. In addition, if everyone agrees, then the prevailing wisdom is that everyone will be more committed to the decision. However, there are times when the need for consensus can be detrimental to group functioning. Consider the recent “fiscal cliff” faced by the U.S. government toward the end of 2012. The White House and Congress needed to reach a deal that would reduce the swelling budget deficit. However, many Republicans and Democrats stuck to their party lines, refusing to compromise. Many viewed the end product that achieved consensus as a less-than-optimal solution. The public gave Congress an approval rating of only 13 percent, expressing frustration with the lack of compromise, but the group may not have been able to function well partly because of the need for consensus.

BITS Pilani, Deemed to be University under Section 3 of UGC Act, 1956

Case – The Calamities of Consensus

If consensus is reached, does that mean the decision is the right one? Consider the Supreme Court’s recent ruling to uphold “Obamacare.” In the days leading up to the decision, the general consensus was that the law requiring U.S. citizens to purchase healthcare insurance would be deemed unconstitutional. Ultimately, that consensus proved to be wrong.

Critics of consensus-based methods argue that any decisions that are ultimately reached are inferior to decisions using other methods such as voting or having a team members provide input to their leader, who then makes the final decision. Critics also argue that, because of pressures to conform, groupthink is much more likely, and decisions reached through consensus are simply those that are disliked the least by everyone.

Questions

S1-2026-27 Work Integrated Learning Programmes S1-2026-27

Is consensus a good way for groups to make decisions? Why or why not?

- Can you think of a time where a group of which you were part relied on consensus? How do you think the decision turned out?
